

ASSET SCREENER: QUERY YOUR CLOUD LIKE A PRO

From Sprawl to Signal.

imPAC's Asset Screener is a powerful, no-code interface for **multi-cloud asset exploration and analysis**.

Build dynamic filters across AWS, Azure, and GCP to locate misconfigurations, track compliance status, or segment assets by risk attributes all without writing queries. Filter sets can be **saved, exported, and turned into policies** making Screener the fastest way to move from observation to action in complex cloud environments.

Transform cloud inventory into a searchable, actionable intelligence layer.

NO CODE. NO QUERIES. NO CHAOS.

See every storage bucket missing encryption, every untagged asset, or every resource failing PCI across clouds, in seconds.

Business Impact

Clean up **misconfigurations faster** with precise filters

Reuse saved filters across teams or audits

Turn filters into policies to go from insight to enforcement

Streamline GRC **workflows** with self-serve visibility
