

CYBER INSURANCE: PROVE YOUR SECURITY CONTROLS

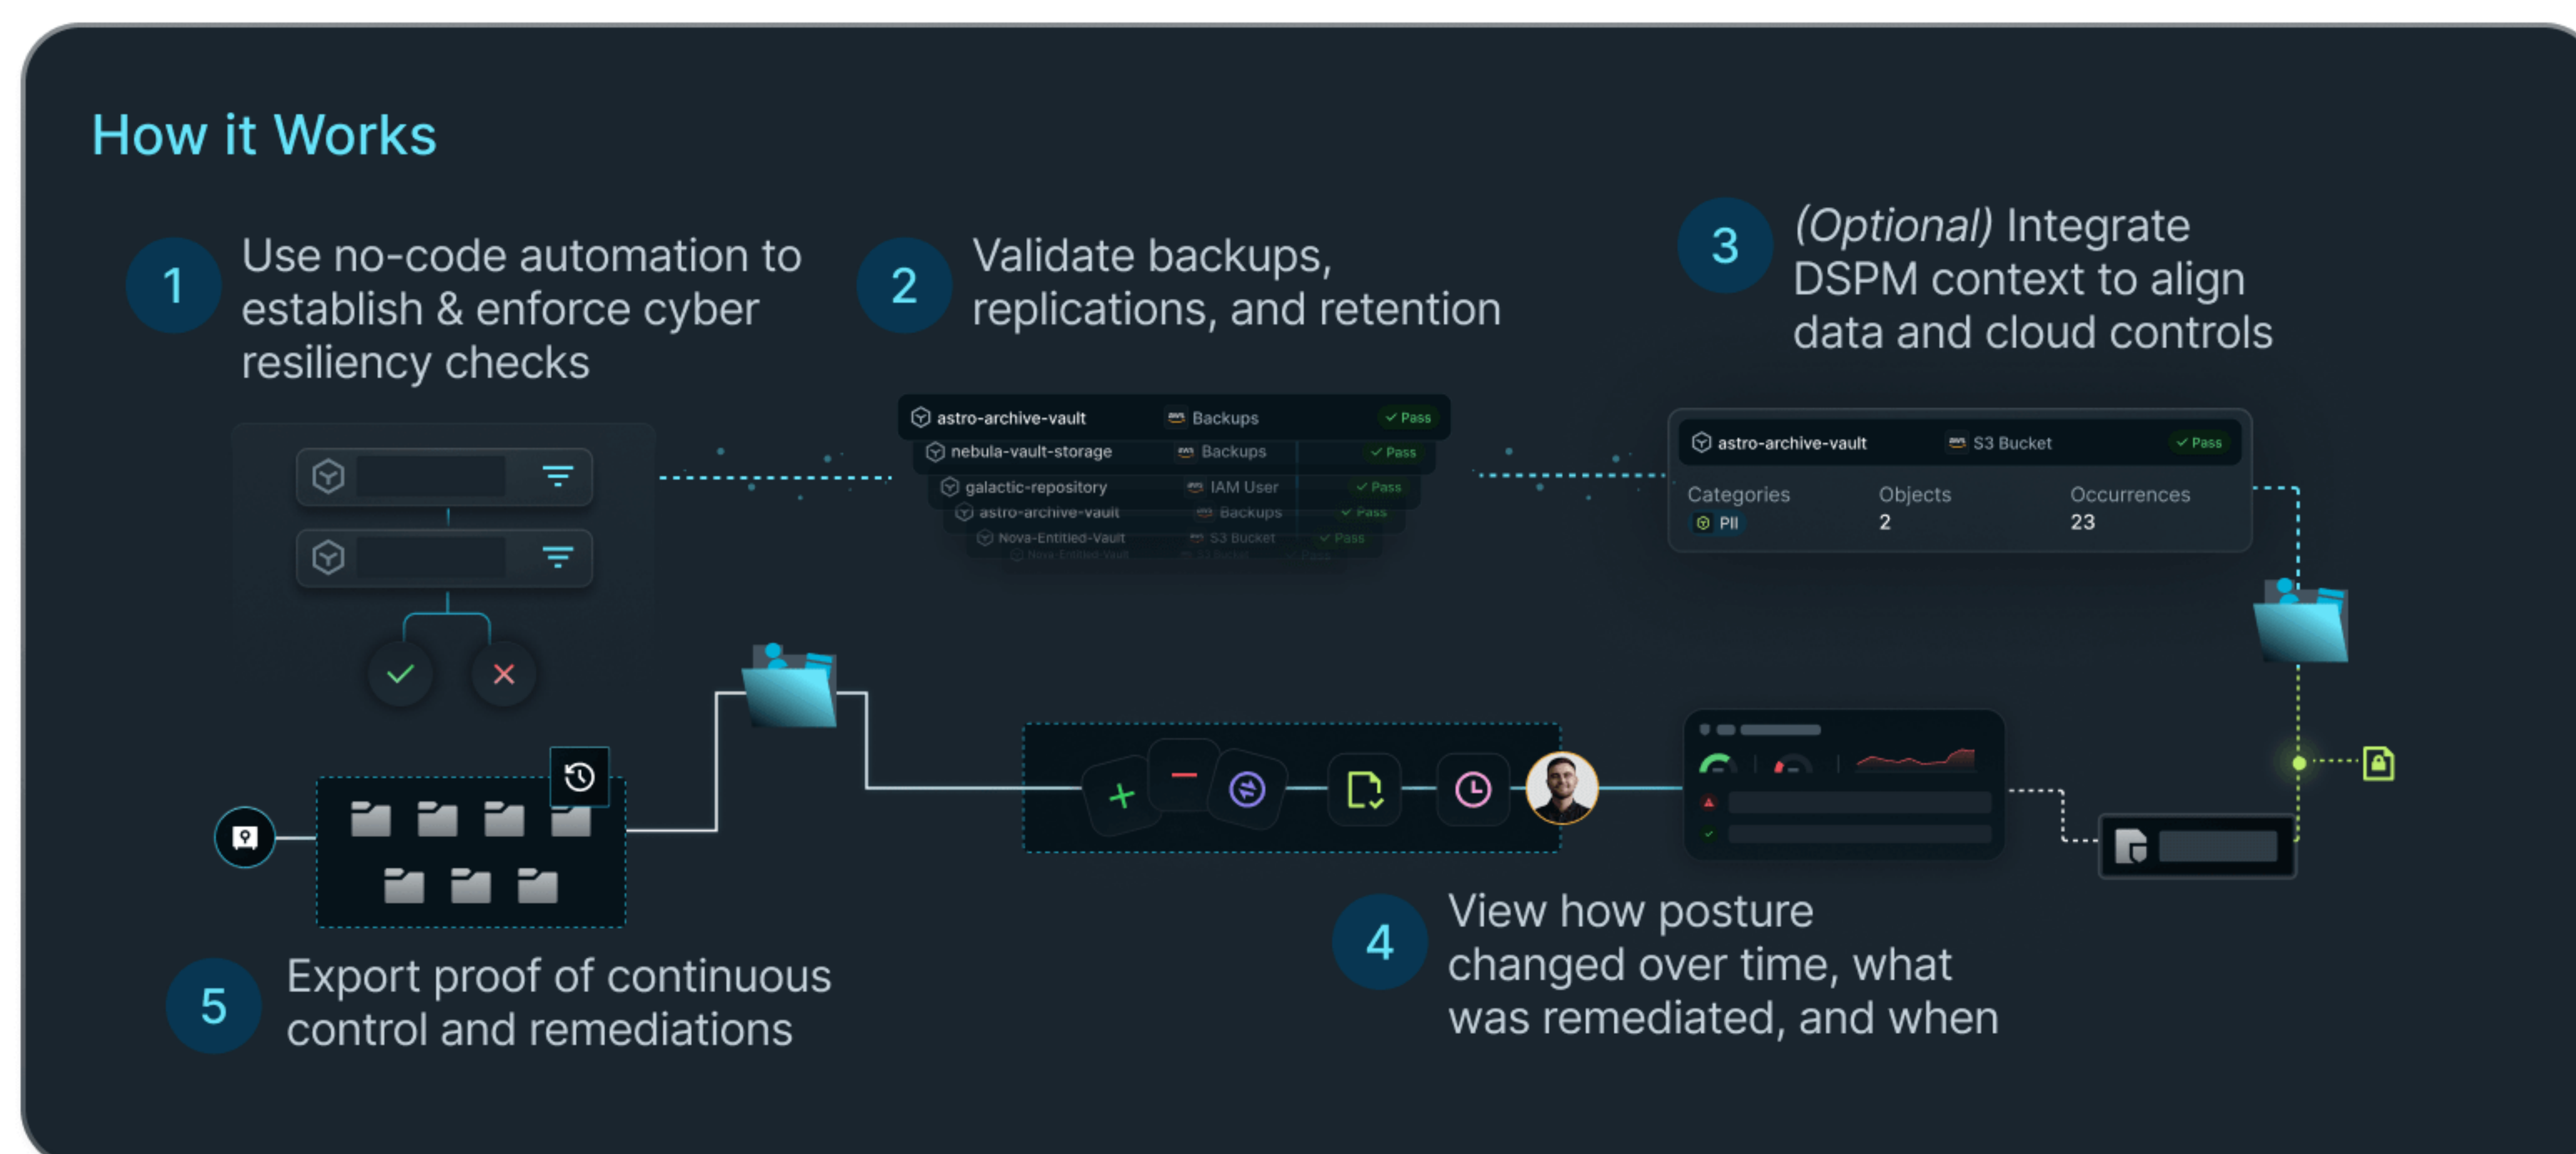

Defend Against Rising Premiums

Cyber insurers want proof that your cloud is actually secure. imPAC Labs enables customers to demonstrate security controls with audit-ready evidence, no-code automated policies, and verifiable progress over time.

Organizations can present a time-based improvement story that shows what controls were created, implemented, and enforced to reduce risk. Premium discussions are now met from a position of strength with detailed evidence.

NO GUESSWORK. NO SNAPSHOTS. NO SURPRISES.

Show progress, not just one-time posture while proving that assets are secure, controls are resilient, compliance is adhered to, and data is region-bound with history to back it up.

Business Impact

Demonstrate program maturity by showing progress over time, not a static snapshot

Negotiate against premium hikes with evidence to push back against insurer scores

Prove data protection by extending DSPM controls and context to cloud workloads

Accelerate readiness with one-click audit-grade proof that's accessible 24/7
