# MASTER YOUR CLOUD CONFIGURATIONS & CONTROLS

imPAC Labs delivers simplified multi-cloud inventory, no-code guardrails, and integrated data context from Varonis so teams can secure their clouds and ship faster while building cloud resiliency.
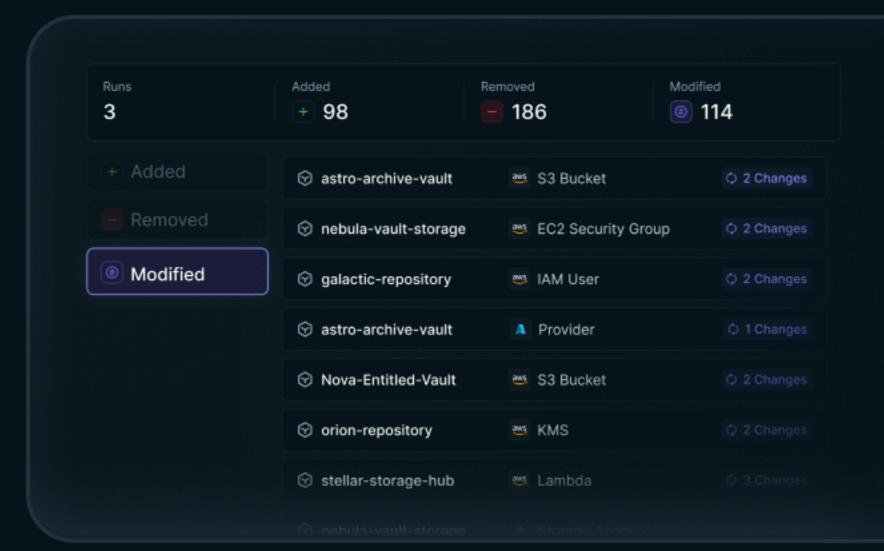

CORE PLATFORM CAPABILITIES

◎ SEE IT: UNLOCK UNMATCHED VISIBILITY

- Gain comprehensive insight into AWS, Azure, and GCP environments via read-only [agentless] access
- Access high-fidelity asset data with built-in risk scoring and AI-anomaly detection to reveal critical resources
- Check critical resource relationships via **Asset Chains** (e.g., AWS S3 buckets → IAM roles → encryption keys)

⊹ FIX IT: AUTOMATE SECURITY CONTROLS

- Create custom dashboards to validate your environment (e.g., check against compliance frameworks like PCI)
- Automate security processes by building natural language policies that can be deployed in minutes
- Cut through alert fatigue and false positives with targeted controls tailored to your business and context

⊿ PROVE IT: DEMONSTRATE YOUR SECURITY POSTURE

- Maintain complete configuration history, track all asset changes, and compare cloud states with **Time Machine**
- Verify cloud asset security and ensure continuous compliance posture with self-evidencing logs
- Eliminate manual processes and streamline audits with automated evidence collection

BUSINESS IMPACT

⧗ Hours not months

- Map full cloud asset inventory in under 1 hour
- Leverage pre-built controls from day one
- Avoid complex integrations and engineering

⏻ Do more with less

- Consolidate multiple point solutions into one platform
- Break down org silos with a unified security view
- Scale security operations without adding headcount

◉ Move beyond compliance

- Build a strong, proactive security foundation
- Understand asset relationships to protect your entire cloud
- Catch misconfigurations before they become breaches
